Course Description

This course emphasizes the practices and principles shared by all photographic media but working with digital camera devices. You will learn camera operations, including proper exposure, depth of field, and the use of lenses. We will also explore the principles of perception, light, color, composition, and visual awareness and how these elements are used to create a successful image. The foundation of photography is accomplished by a productive work routine of shooting and looking at other photographers' work.

Essential concepts and history will be discussed through lectures and presentations while students continue shooting based on assigned and your own theme, followed by reviews. You are encouraged to employ your aesthetic, intellectual, and emotional concerns as a basis for your photographic expressions.

Course Objectives

- Evaluate and interpret photographic imagery based on objective and subjective observations and descriptions, and question preconceptions regarding what makes a good photograph.
- Formulate an awareness, and develop an ability to analyze the elements of good composition; including light, shadow, shape, form, scale, line, perspective, color, texture and framing.
- Demonstrate camera operations including proper exposure, depth of field, and the use of lenses, filters, flash, and other photographic accessories.
- Compare and contrast art works, styles and movements within the photographic medium, and interpret visual communication from culturally and socially diverse groups.
